Improving the usability of online usability surveys with an interactive Stripe scale

Matevž Pesek, Alja Isaković,
Gregor Strle, Matija Marolt

HCI
2016

Do we need a Likert alternative?

- **Likert scale pros:**

- Widely used in standardised surveys (SUS)
- Easy to implement online (radio buttons)
- Familiarity

I think that I would like to use this system frequently.

Strongly disagree

Strongly agree

● 4

● 5

I found the system unnecessarily complex.

Strongly disagree

Strongly agree

- **Likert scale cons:**

- Not enjoyable for the users
- Difficult comparison in longer surveys

Potential benefits of a Likert alternative for online surveys

- An **alternative** interface?
 - More compact and mobile friendly
 - Easier comparison of answers
 - Interactive feedback
 - Happier users -> better retention
 - Using modern web technologies

Motivation: results from a large sample study on music and mood

- Used Graph UI on **741** participants providing total **~7400** responses
 - Perceived/induced emotions of audio clips

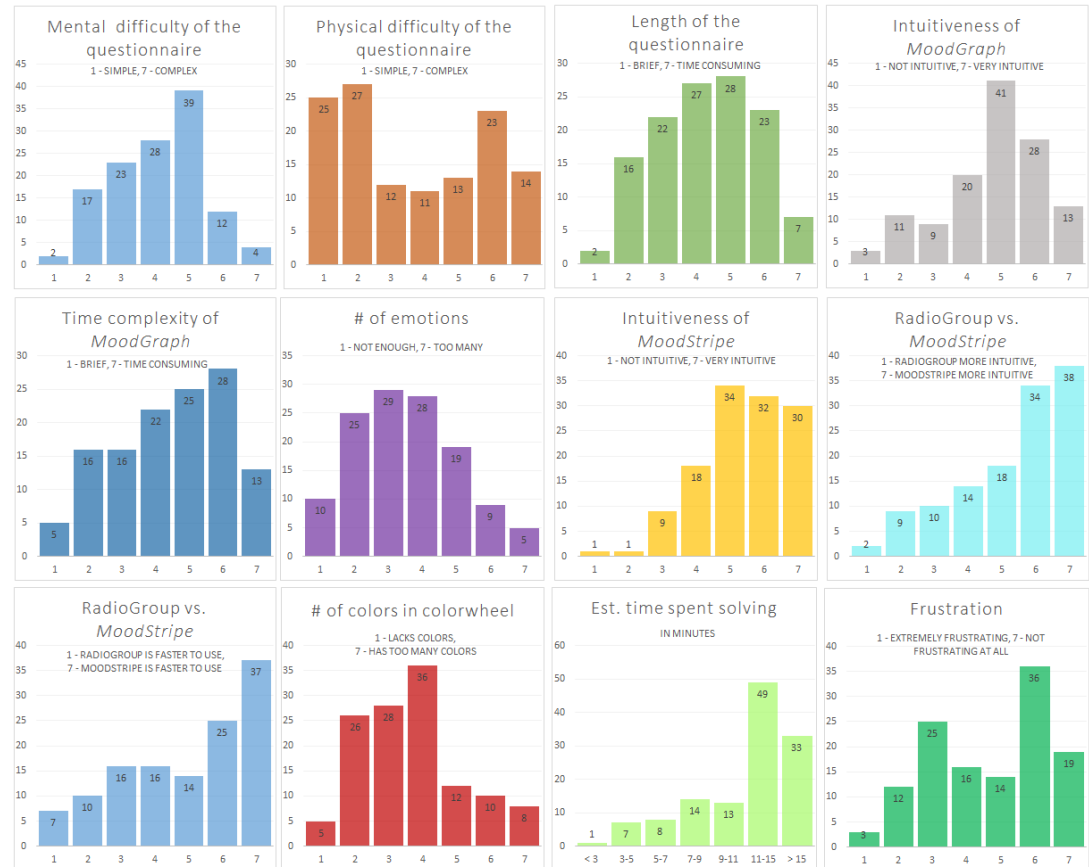

| | | | | | |
|---|-------------------------------|----------------------------|-------|------------------------------------|--------------------|
|  | Sadness | Disappointment Calmness | Fear | Happiness Tension | Anticipation |
|  | Joy Liveliness Calmness | Surprise Dreamy | Anger | Gloominess Fear Anticipation | Longing Relaxed |

Motivation: results from a large sample study on music and mood

- Positive comments regarding Graph UI in the initial study
- Additional study to compare Graph and Likert (RadioGroup)
- 129 participants involved in afterstudy
 - Stripe and Graph **more intuitive**
 - **Less frustrating**
 - **Far better** than radioGroup (Likert) interface

The Stripe: interface elements

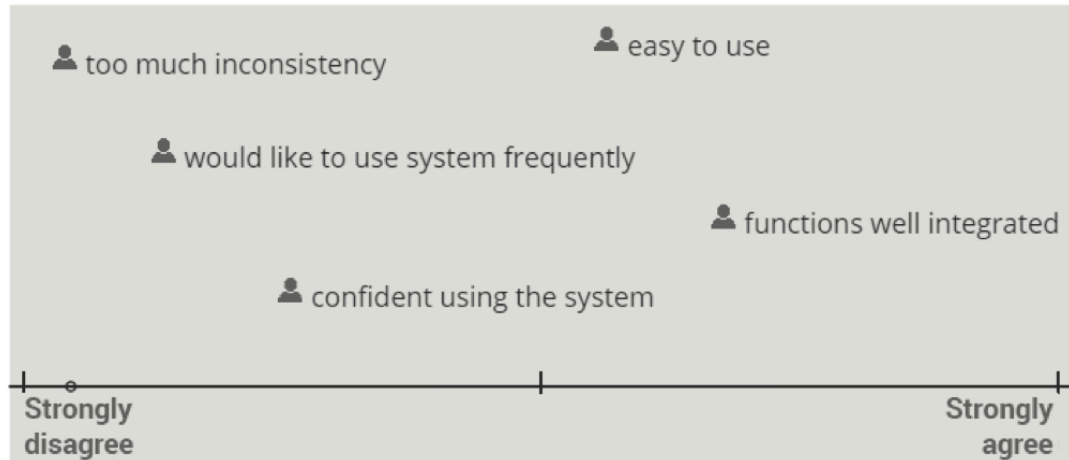

Drag & drop

A screenshot of a survey question. On the left, there is a grey box containing a person icon and the text "would need the technical support" and "cumbersome to use". On the right, there is a light grey box containing the text "unnecessarily complex", "people would learn to use system quickly", and "needed to learn a lot of things".

Answer interpretation

Statement: I found the system very cumbersome to use

Visual comparison
of answers

- **Interactive**

- Using broadly **available** technologies (HTML5, JS)
- Incorporating existing interaction methods (drag&drop)

The Stripe: main research questions

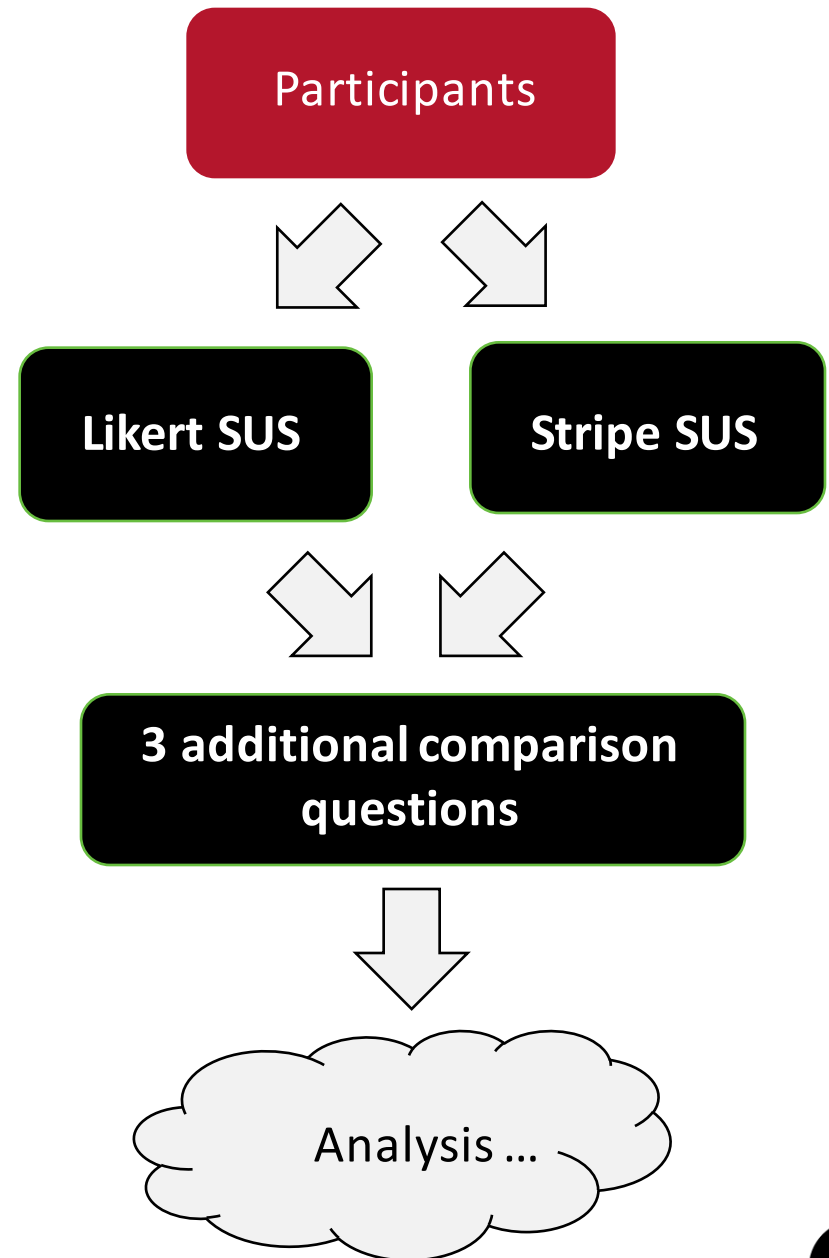

- Can the Stripe interface be used to gather valid results in online surveys?
 - We need to make sure the UI doesn't induce bias
- Which UI do users prefer?
 - In terms of intuitiveness and ease of expressing opinions

The experiment

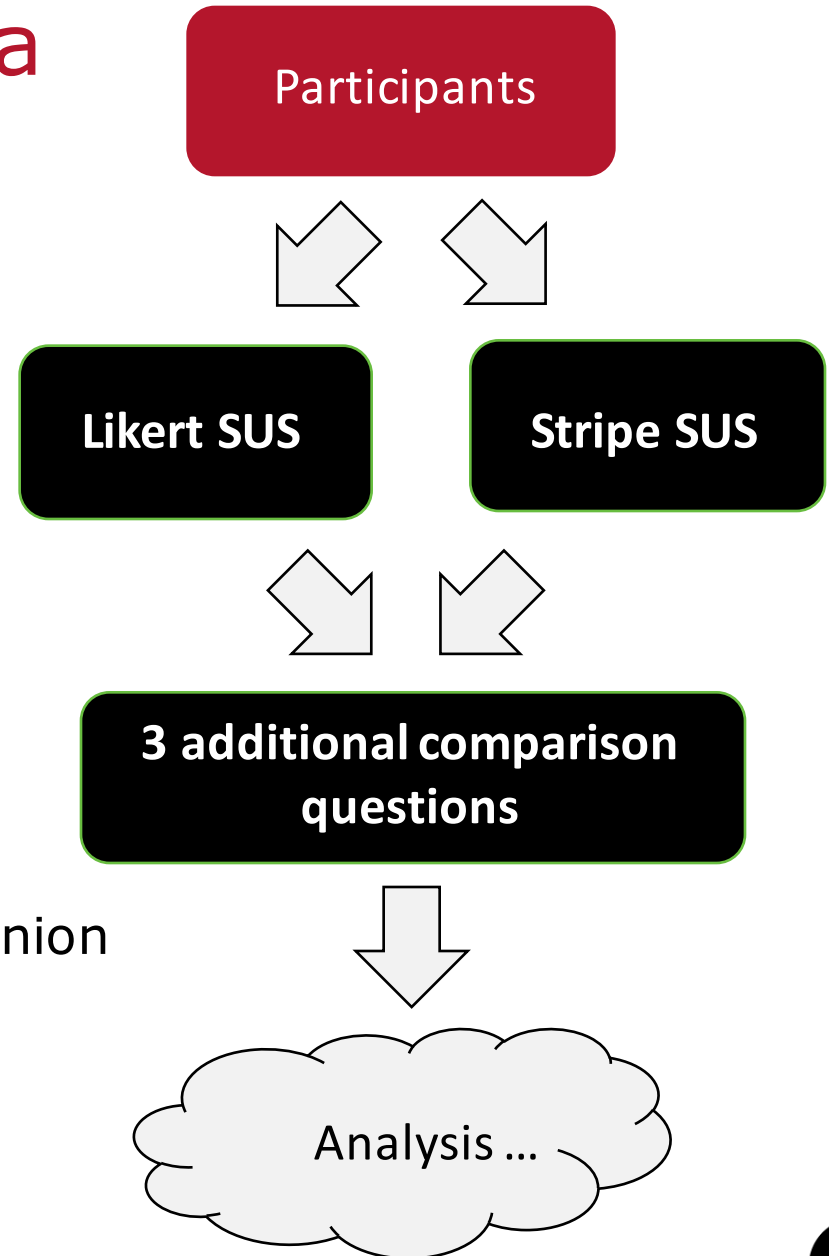

- Within-subject study of Stripe and Likert UI
- Compare SUS scores from both interfaces
- Additional questions to measure user preference

Analysing the data

- 68 participants
 - Solving both SUS
 - Responding to additional 3 questions
- 3 questions:
 - Which UI is more intuitive?
 - Which UI takes more time?
 - Easier/harder to express opinion using the MoodStripe?

The results

- SUS results/diff table

| | avg. SUS score | σ of SUS scores |
|--------------------|----------------|------------------------|
| 1. 5-degree SUS | 79.88 | 18.03 |
| 2. MoodStripe SUS | 79.02 | 16.61 |
| 3. Bin. MoodStripe | 80,55 | 17.27 |
| Δ 1 vs. 2 | 0.86 | 1.42 |
| Δ 1 vs. 3 | 1.67 | 0.76 |

- Both Stripe and Likert provide reliable SUS results (even when compared to other studies)

The results

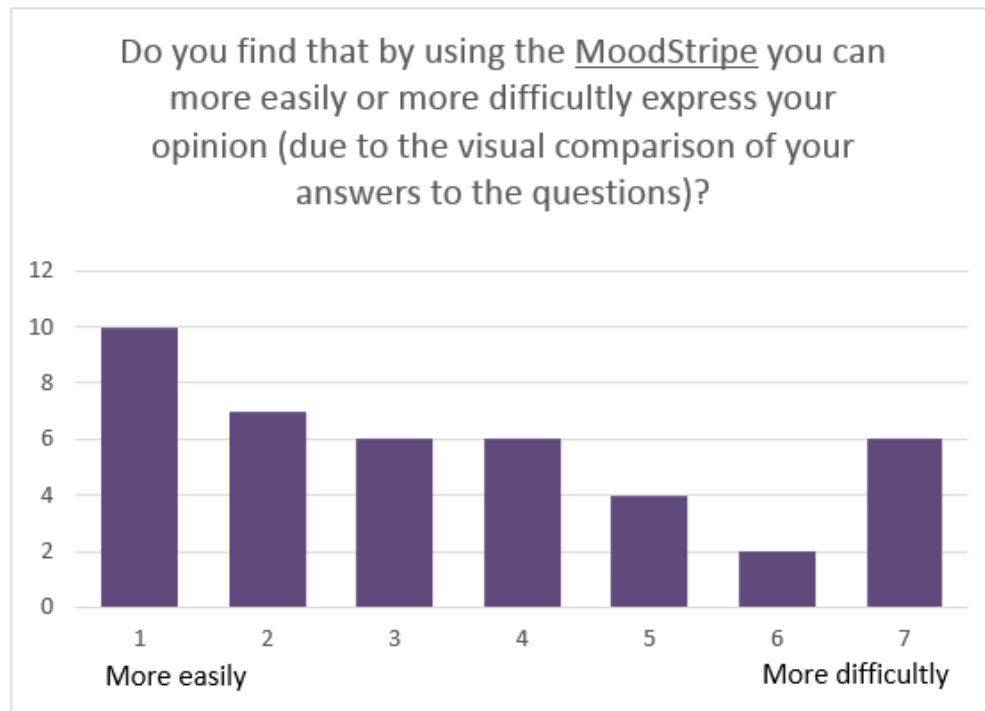

- User preference: Stripe was more intuitive

The results

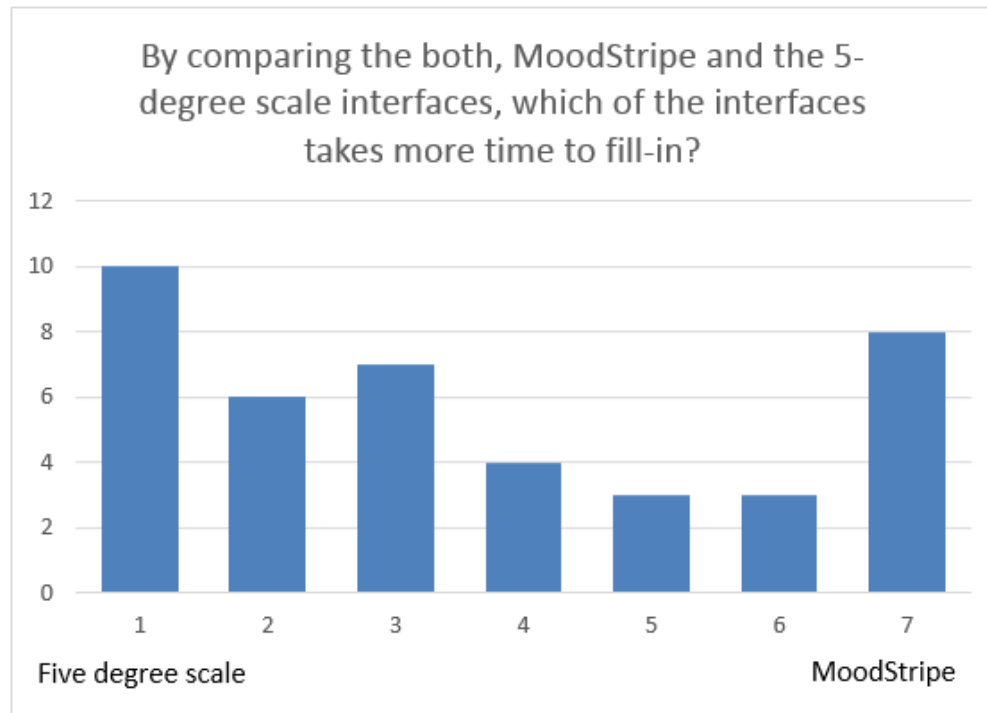

- User preference: Stripe was easier

The results

- Likert perceived as more time consuming!

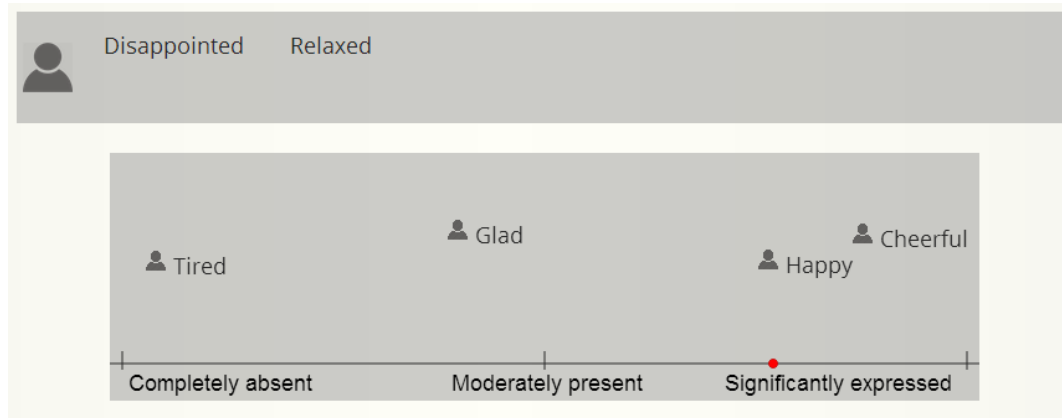

- Graphic scales generally take more time

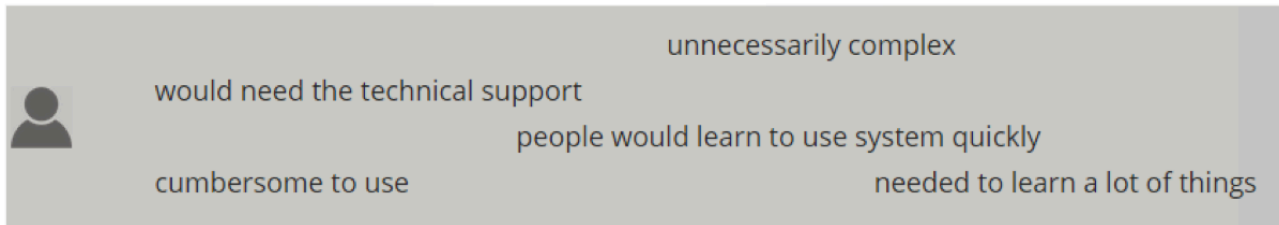

Conclusion

- Stripe is a valid Likert scale alternative in online SUS
- Stripe was rated as more intuitive and easier for expressing opinions
- Surprisingly, the Stripe was also perceived as less time consuming – more research needed
- Future work will include additional Stripe modifications

Thank you for your time

Statement: I found the system very cumbersome to use
